

The Danish Shipping Education has been qualified on the EQF

November 2021

The Danish Shipping Education has received an official stamp of approval. It has been qualified at level 5 on the European Qualification Framework and can now be equated with public educations of the same length.

The education corresponds to 120 ECTS-points (European Credit Transfer System). The equivalent of two years full time study.

The level 5 qualification is based on the high quality of the instructors, the learning outcomes of the education and the regular evaluations, which help us maintain and ensure a high quality. Danish Shipping Education is a private education, and the qualification enhances the opportunities for further education in Europe, because it makes the interaction between private and public education programmes easier.

What does this mean for the trainees?

This means that when trainees from the Danish Shipping Education have finished their education, they can apply to educations on level 6 on the EQF, which is the bachelor level. On some educations it will be possible, to apply for credit transfer, which means that a level 6 education might be shorter. The credit transfer process is done on the applied education organization, and the application will be assessed individually.

In the future, the Danish Shipping Education team will work towards building possibilities for continuing education with a Danish Shipping Education Diploma in both Denmark and other countries.

Best Regards,

Susan Ea Kirkegaard
Educational adviser
